

Usability Testing & Analysis Report

Project Title

E-Commerce Nova cart Website Prototype – Figma Interactive Design

Prototype Link

<https://www.figma.com/proto/KOFInjjhkCll1vwC4lLdzY/website?node-id=3-2&p=f&t=A5RMsUtM9YD1HMPG-1&scaling=scale-down&content-scaling=fixed&page-id=0%3A1&starting-point-node-id=3%3A2>

1. Objective

The purpose of this usability testing was to evaluate the ease of use, navigation, design clarity, and user interaction experience of the website prototype created in Figma.

The testing focused on:

- Navigation efficiency
 - User understanding
 - Accessibility of important sections
 - Interaction flow
 - Overall user satisfaction
-

2. Participants

A total of 3 users participated in the usability testing.

Participant Experience Level

User 1	Beginner
User 2	Intermediate
User 3	Beginner

3. Testing Method

The prototype was shared with users through the Figma prototype link.

Users were asked to complete specific tasks while observations and feedback were recorded.

Testing Method Used:

- Observation-based usability testing
 - Task completion analysis
 - User feedback collection
-

4. Test Scenarios

Scenario 1 – Navigate Through Homepage

Task:

Users were asked to open the homepage and identify the purpose of the website.

Goal:

Check whether the homepage communicates the website purpose clearly.

Observation:

Most users understood the purpose quickly, but one user mentioned that the homepage content could be more visually highlighted.

Scenario 2 – Explore Navigation Menu

Task:

Users were asked to use the navigation menu to move between sections/pages.

Goal:

Evaluate navigation clarity and ease of movement.

Observation:

Users were able to navigate successfully, but one user initially struggled to identify clickable sections.

Scenario 3 – Identify Main Call-to-Action Button

Task:

Users were asked to locate and click the main action button.

Goal:

Determine visibility and accessibility of important actions.

Observation:

Two users found the button easily, while one user suggested increasing button size and contrast.

Scenario 4 – Interact with Prototype Flow

Task:
Users were asked to move through the prototype interaction flow.

Goal:
Check whether transitions and interactions feel smooth and understandable.

Observation:
Users reported that transitions were smooth and interactions felt intuitive.

Scenario 5 – Evaluate Visual Design

Task:
Users were asked to review colors, typography, spacing, and layout.

Goal:
Analyze visual consistency and readability.

Observation:
Users liked the modern design style, but suggested slightly improving text readability in some sections.

5. User Feedback

User Feedback

- User 1 Website looks modern and easy to navigate
 - User 2 Buttons should be slightly larger
 - User 3 Some text sections need better readability
-

6. Findings

Issue Identified	Severity	Suggested Improvement
Some clickable areas not obvious	Medium	Add clearer hover states or button styles
Button visibility could improve	Medium	Increase contrast and size
Text readability in some sections	Low	Improve font size and spacing

7. Recommendations

Based on usability testing, the following improvements are recommended:

1. Improve button visibility using stronger contrast.
 2. Increase readability by adjusting font sizes and spacing.
 3. Add clearer indicators for interactive elements.
 4. Enhance accessibility and responsiveness for better user experience.
-

8. Conclusion

The usability testing process successfully identified strengths and improvement areas in the website prototype.

The prototype demonstrated:

- Good navigation flow
- Clean visual structure
- Smooth interaction design

The feedback collected from users will help refine the interface and improve overall usability in future iterations.
